News Flash Stop Press!! Dencraft Welcomes New Arrival

Dencraft is pleased to announce that Ian Stapleton has joined its ranks.

Ian pictured above being greeted by Dencraft partners Steve & Alison Osgathorpe is a highly skilled & knowledgeable Porcelain Ceramist, with over 20 years experience.

Steve & Alison both commented "Ian brings a vast amount of knowledge and skill, with uncompromising standards on quality. He is an integral piece in achieving Dencrafts business plan, objectives and vision, to ensure we continue to give our clients unrivalled Product, quality and service.

Ian is very well known for the high quality of his work with in Yorkshire and the surrounding areas, and we are extremely pleased he has joined the Dencraft team".

Ian cut his teeth (excuse the pun) as a dental technician, and spent the last 20years working for a well known Lab in Sheffield, his expertise covers many areas of dental technology including Smile Design, Implant Based Restorations, Authentic Press able System, and Copper Plating Dyes to name a few.

Married for 10 years to Amy with two young children Katie and Isabelle, Ian gave his reasons for joining Dencraft as: wanting to focus on Smile design and aesthetic dentistry for today's demanding patient's .

Ian commented: Not only was I sold on Dencrafts business plan, vision and commitment to quality but I was blown away by my first impressions of the Lab when I walked through the door. I would encourage clients both new and old who have not visited the Lab to arrange a visit and view the impressive facilities Dencraft has to offer.

If you would like to know more about the products and services that Dencraft offers, open an account or arrange a visit to the Lab then please contact Dencrafts Business Manager on:

Dencraft Successfully Completes Damas Surveillance Audit

Twelve months after actual achieving DAMAS accreditation Dencraft has just passed it first annual surveillance audit. Amtac conducted the Audit, which is an annual requirement by DAMAS in order to maintain accreditation. The auditor commented: "The client has a well-implemented quality system, which provides plenty of evidence of compliance to the DAMAS specification. The Laboratory is well organised, very professional and extremely clean and tidy".

DENCRAFT introduce HFO Enamel Plus for Indirect Restorations **A Truly 'Aesthetic' Composite**

As the general public's expectations of today's dental restorations continues to grow, we have become more aware of the need to provide excellent aesthetic dental materials.

For many years, gold and porcelain has been the "benchmark" guide for quality restorations. But, significant advances in the development and production of synthetic materials for dentistry has resulted in the appearance of composite resins that can be termed 'truly aesthetic'. The appearance of these materials can rival that of the best porcelains and their ease of use has enabled dentists and technicians to produce exceptional crowns, bridges, inlays and veneers.

HFO Enamel Plus Composite is a material that fulfils the requirements of a modern day restorative material.

Developed in Italy by Dr Lorenzo Vanini, HFO Enamel Plus is a microhybrid resin that is ideally suited to the production of both direct and indirect dental restorations.

Having seen the benefits of this highly innovative material, Dencraft are now pleased to offer our clients the opportunity to have their indirect composite restorations fabricated in HFO Enamel Plus.

HFO Enamel Plus offers true opalescence and fluorescence as found in natural dentine. It also incorporates the unique glass connector that imparts true diffusion of light within the restoration. HFO Enamel Plus reacts to differing light conditions, ensuring a natural appearance at all times.

It also exhibits true value and chromaticity together with translucency and brightness that is equivalent to that of the natural enamel.

The unique colour chart, colour mapping and the variable thickness shade guide enable accurate interpretation of colour, depth, natural effects and surface texture.

HFO Enamel Plus has evolved into an ideal restorative material, that not only offers superb aesthetics but also ideal hardness, together with a wear factor that is equivalent to that of natural teeth.

Crowns, bridges, inlays, veneers and implant restorations can all be accommodated and minor or major modifications to existing restorations can be made easily and quickly. HFO Enamel Plus Composite is the ideal definitive restorative material for laboratory fabricated indirect restorations and is now available from Dencraft.
